India wants to keep expanding oil refining capacities to hedge upon the global chokepoints

The current capex pipeline that is there -

Barmer is the one that got commissioned. The order book behind the 258 → 310 MMTPA path is what actually funds the ecosystem:

- 1) Panipat P-25 (IOCL): 15 → 25 MMTPA
- 2) Cauvery Basin Refinery (CPCL): new 9 MMTPA grassroots
- 3) Visakh Refinery Modernisation (VRMP) (HPCL)
- 4) Barauni (IOCL): new ~180,000 bpd crude unit (older units to be decommissioned)
- 5) Numaligarh (NRL, OIL group): +120,000 bpd expansion
- 6) Gujarat refinery (IOCL): +86,000 bpd
- 7) Bina & Mumbai (BPCL): unit additions + Bina petchem
- 8) Paradip petrochemical complex (IOCL)
- 9) Andhra Refinery (BPCL): new grassroots
- 10) Ratnagiri West Coast (RRPCL — IOCL/BPCL/HPCL, ± Aramco/ADNOC): the 60 MMTPA long-shot mega-project still on the map

Also we have attached here the detailed value chain that is there which benefits with this capex cycle.

Modi says India will keep expanding oil refining capacity

India will continue to build new crude oil refineries in order to ensure supply chain security even as Western nations shut processing units, Prime Minister Narendra Modi said.

'Biggest Crisis of 21st Century': PM Modi Highlights India's Diplomatic Triumph During Iran Conflict

(Bloomberg) — India will continue to build new crude oil refineries in order to ensure supply chain security even as Western nations shut processing units, Prime Minister Narendra Modi said.

“No new refinery has come up in the US in the last five decades and capacity in [Europe](#) has also been constantly declining,” Modi said Saturday, as he inaugurated the country’s first new refinery in a decade. He said India will continue to expand capacity.

The 180,000-[barrels](#)-a-day greenfield refinery in the heart of Rajasthan’s Thar desert, which has 2.4 million tons a year of petrochemical capacity and was built at a cost of \$8.3 billion, is likely to be the only new refinery commissioned globally this year, according to BloombergNEF analysts.
